### **BUSINESS OUTSTANDING**

### **CONFIRMATION OF MINUTES**

1. <u>CONFIRMATION OF MINUTES OF THE ENVIRONMENT AND SUSTAINABILITY</u> <u>COMMITTEE NO. 2021(10) OF 4 NOVEMBER 2021</u>

### RECOMMENDATION

That the minutes of the Environment and Sustainability Committee No. 2021(10) held on 4 November 2021 be confirmed.

### **OFFICERS' REPORTS**

### 2. SUSTAINABILITY STRATEGY

This is a report concerning the submission of the final draft of Ipswich's Sustainability Strategy (Attachment 1) to Council for adoption. A final round of community consultation has been undertaken, as has internal consultation with key stakeholders. Minor amendments that do not materially change the strategy have been made in response to the internal and community consultation feedback to produce the final draft of the Sustainability Strategy.

### **RECOMMENDATION**

That the Sustainability Strategy be received and adopted.

### 3. OUTCOMES - YOUTH SUSTAINABILITY SUMMIT

This is a report concerning the Ipswich Youth Sustainability Summit. The Summit was held at the Ipswich Civic Centre on Wednesday 3 November and was a full day forum for Primary School students in grades 4 & 5. The day was designed to educate and inform students on sustainability and to develop and be involved with sustainability projects, innovations or ideas identified as important within their community.

Students from Springfield Central State School will be attending the meeting to provide an overview of their experience at the Youth Sustainability Summit. A video will also be shown of students from Goodna State School who will also be providing an overview of their experience.

### **RECOMMENDATION**

That Council receive and note the outcomes of the Youth Sustainability Summit.

### **NOTICES OF MOTION**

### **MATTERS ARISING**

### **BUSINESS OUTSTANDING**

Nil

### **CONFIRMATION OF MINUTES**

1. <u>CONFIRMATION OF MINUTES OF THE ENVIRONMENT AND SUSTAINABILITY</u> <u>COMMITTEE NO. 2021(09) OF 7 OCTOBER 2021</u>

### **RECOMMENDATION**

Moved by Mayor Teresa Harding: Seconded by Councillor Jacob Madsen:

That the minutes of the Environment and Sustainability Committee held on 7 October 2021 be confirmed.

AFFIRMATIVE NEGATIVE
Councillors: Councillors:
Milligan Nil

Fechner Harding Madsen Kunzelmann

The motion was put and carried.

### **OFFICERS' REPORTS**

### 2. <u>ENVIROPLAN 25 YEARS CAMPAIGN HIGHLIGHTS</u>

Ipswich Enviroplan celebrated 25 years in 2021. The Enviroplan 25 Years campaign had two (2) major purposes:

- To coordinate an awareness campaign to celebrate Ipswich Enviroplan's 25<sup>th</sup> anniversary.
- To encourage conservation and environment education and behaviour change.

This is a report concerning the Ipswich Enviroplan 25 years campaign highlights.

### **RECOMMENDATION**

Moved by Councillor Jacob Madsen:

Seconded by Councillor Andrew Fechner:

That Council receive and note the key highlights pertaining to celebrating 25 years of Ipswich Enviroplan.

AFFIRMATIVE NEGATIVE
Councillors: Councillors:
Milligan Nil

Fechner Harding Madsen Kunzelmann

The motion was put and carried.

### **NOTICES OF MOTION**

Nil

### 3. <u>MATTERS ARISING</u>

The Manager, Environment and Sustainability addressed the committee to outline a correction required to the Ipswich Rivers Improvement Trust 2021-2022 Annual Precept Report from the Environment and Sustainability Committee Meeting of 2 September 2021.

### **RECOMMENDATION**

Moved by Councillor Russell Milligan: Seconded by Councillor Andrew Fechner:

That the minutes notate a correction to the Ipswich Rivers Improvement Trust 2021-2022 Annual Precept Report presented to Council's Environment and Sustainability Committee on 2 September 2021, being the removal of the incorrect paragraph as follows:

"If there is a failure to negotiate and agree on an amount within a reasonable timeframe, the amount the local government must contribute will be the amount decided by the Minister".

AFFIRMATIVE NEGATIVE
Councillors: Councillors:
Milligan Nil

Fechner Harding Madsen Kunzelmann

The motion was put and carried.

### PROCEDURAL MOTIONS AND FORMAL MATTERS

The meeting commenced at 11.17 am.

The meeting closed at 11.34 am.

Doc ID No: A7700468

ITEM: 2

SUBJECT: SUSTAINABILITY STRATEGY

AUTHOR: SENIOR SUSTAINABILITY OFFICER

DATE: 9 NOVEMBER 2021

### **EXECUTIVE SUMMARY**

This is a report concerning the submission of the final draft of Ipswich's Sustainability Strategy (Attachment 1) to Council for adoption. A final round of community consultation has been undertaken, as has internal consultation with key stakeholders. Minor amendments that do not materially change the strategy have been made in response to the internal and community consultation feedback to produce the final draft of the Sustainability Strategy.

### RECOMMENDATION

That the Sustainability Strategy be received and adopted.

### **RELATED PARTIES**

There was no declaration of conflicts of interest.

### **IFUTURE THEME**

Natural and Sustainable

### PURPOSE OF REPORT/BACKGROUND

Following the Mayor and Councillor Workshop for the draft Sustainability Strategy held on 7 September 2021, amendments were made to the strategy in response to the comments provided at the workshop and an updated tracked-change version was provided back to the Mayor and Councillors via a Councillor's Briefing Note dated 13 September 2021.

The amended Sustainability Strategy was then circulated for a final community consultation 'check-in' phase to verify community support for the content and strategic direction of the strategy. Community consultation consisted of eight face-to-face sessions at council's libraries and select shopping centres and an online survey on Shape Your Ipswich (SYI). The results of this consultation were positive, in that the feedback was consistent with the feedback from the previous community consultation work and aligned with the themes of the newly drafted Sustainability Strategy (refer to Attachment 2 for the community consultation report).

Alongside the community consultation sessions, further internal consultation was undertaken with key stakeholders across council departments. The internal cross-

departmental consultation resulted in refining some of the actions in the strategy and the sessions also served to socialise the content of the strategy more broadly.

Feedback and comments from both internal and community consultation efforts have been incorporated into the final draft of the strategy and minor amendments made in the following action and focus areas of the strategy:

- Sustainable Council
  - Water Efficiency
  - o Resource Recovery and Waste Minimisation
- Climate Adaptation
  - Urban Heat and Urban Greening
  - Disaster Management
- Natural Environment and Healthy Waterways
  - Natural Environment and Cultural Landscapes
  - Waterways and Wetlands

The nature of the amendments does not materially change the intent and direction of the Sustainability Strategy from the version presented at the community consultation or the Mayor and Councillor Briefing session.

### **LEGAL/POLICY BASIS**

This report and its recommendations are consistent with the following legislative provisions: Local Government Act 2009

Environmental Protection Act 1994

Ipswich City Council Sustainability Policy (Nov 2020)

### **RISK MANAGEMENT IMPLICATIONS**

- Corporate responsibility risk Council is able to ensure that Council's activities are undertaken in a sustainable manner from an economic, social (including cultural), environmental and governance perspective and on behalf of the Ipswich community.
- Reputational risk should Council not proceed in delivering the Sustainability
   Strategy, there is reputational risk as this strategy is a catalyst project in iFuture.
- Operational risk the Sustainability Strategy provides the strategic pathway to operate more efficiently (resource conservation and cost savings) and to identify risks associated with climate change.

• Legal risks – the Sustainability Strategy identifies the requirement to undertake climate risk analysis for the organisation to ensure that those risks are fully understood and can be planned for.

### **HUMAN RIGHTS IMPLICATIONS**

HUMAN RIGHTS IMPACTS	5					
OTHER DECISION						
(a) What is the	That the Sustainability Strategy be received and adopted.					
Act/Decision being made?						
(b) What human rights	- Right to life					
are affected?	<ul> <li>Cultural rights (section 27)</li> </ul>					
	- Cultural rights					
(c) How are the human rights limited?	If the Sustainability Strategy is not adopted, there is the potential for the human rights (identified above) to be					
	impacted/limited by not ensuring there are strategies in place					
	to protect intergenerational equity and preservation of cultural place and practice.					
(d) Is there a good reason for limiting	Not applicable – by adopting the Sustainability Strategy, human rights will not be limited.					
the relevant rights?	The true to the military					
Is the limitation fair						
and reasonable?						
(e) Conclusion	The decision is consistent with human rights.					

### FINANCIAL/RESOURCE IMPLICATIONS

Whilst a high-level implementation plan has been developed alongside the Sustainability Strategy, a more detailed five-year implementation plan is currently being established. The detailed five-year implementation plan will be utilised to create project briefs and business cases to submit as part of the capital and operational budget builds in the coming financial years.

### **COMMUNITY AND OTHER CONSULTATION**

The community consultation report for the Sustainability Strategy can be found in Attachment 2.

Key results and findings from the community consultation efforts were as follows:

- 111 people were engaged in face-to-face consultation
- 44 people responded to the strategy on SYI

- Feedback from the community with this round of consultation was consistent with previous consultation
- There was strong agreement and agreement regarding the strategy's goal and strategic framework
- There was strong agreement and agreement regarding the 'Climate Adaptation' Priority Action Area, and the 'Transport and Mobility' and 'Circular Economy' Action Areas
- In the face-to-face community consultation sessions, it was observed that younger people were more keenly engaged and interested in the sustainability conversation than the previous consultation sessions in 2020 i.e. they approached the pop-up stall to talk with council staff regarding sustainability and climate change

Internal consultation was also conducted across 15 cross-departmental teams in council who were identified as key stakeholders in delivering the strategy and who had been engaged previously in the strategy development. The internal consultation helped to refine some of the strategy action items from a practical delivery perspective.

### **CONCLUSION**

The Sustainability Strategy for Ipswich has been finalised after undertaking community and internal consultation throughout October and early November 2021. Comments have been provided, considered and incorporated into the final draft of the strategy. Ipswich's Sustainability Strategy is ready to be approved and adopted by Council.

# ACKNOWLEDGEMENT OF COUNTRY

Ipswich City Council respectfully acknowledges the Traditional Owners as custodians of the land. The Traditional Owners whose earth, winds and water we share, and have had a deep spiritual and cultural connection to country for thousands of years. We pay our respects to their elders, past, present and emerging, as the keepers of the traditions, cultures and stories of a proud people.

### INTRODUCTION

lpswich is the fastest growing Local Government Area (LGA) in Queensland and one of the fastest growing Local Government Areas in Australia. In recognition of the pace of growth in Ipswich, council's iFuture Corporate Plan has identified the Sustainability Strategy as a 2021-2026 catalyst project under the Natural and Sustainable theme. The purpose of the Sustainability Strategy is to detail how we will increase our existing efforts and implement new actions towards making lpswich a more sustainable place to live as we continue to grow. Through this strategy, council defines sustainability for Ipswich by addressing key challenges identified through consultation with the community. The Sustainability Strategy provides the direction as to how we work to deliver, partner and advocate for effective sustainability outcomes in meeting the city's challenges.

The strategy presents five key sustainability Action Areas. Within these Action Areas are two Priority Action Areas whereby council is either creating a new strategic direction or strengthening existing efforts. The two Priority Action Areas are:

- 1. Sustainable Council
- 2. Climate Adaptation

The Priority Action Areas present an opportunity to build capacity as an organisation in corporate sustainability and as a community in climate adaptation.

The remaining Action Areas are called Progressed Action Areas and are:

- 3. Transport and Mobility
- 4. Natural Environment and Healthy Waterways
- 5. Circular Economy

These three Progressed Action Areas have existing council strategies and plans that are currently being delivered and have been identified, through consultation, as being important areas in defining sustainability for lpswich. This strategy directly cross-references the work already being undertaken in these Progressed Action Areas to provide a well-rounded approach to sustainability for the city.

This strategy is also supported by a comprehensive implementation plan that will help us deliver on our goals. The implementation plan communicates how we aim to improve our sustainability performance within an organisational operational and community-wide context from 2021-2026. During this five-year period, the implementation plan will be reviewed and adjusted every two years as technology progresses, regulatory reforms occur, we continue to learn, and stakeholder feedback is continuously incorporated.

The Sustainability Strategy recognises the important role that Ipswich City Council, local business and the community play in achieving the city's sustainability goals.

### WHAT IS SUSTAINABILITY?

The concept of sustainability is a broad one and means different things to different people. However, this strategy embraces the following definition:

'Sustainability means balancing economic, social, cultural and environmental factors to support a desired quality of life for current and future generations'.

### SUSTAINABLE DEVELOPMENT

In 1987, the Bruntland Commission published its report, Our Common Future, in an effort to link the issues of economic development and long-term environmental stability. In doing so, this report provided the definition of sustainable development as "development that meets the needs of the present without compromising the ability of future generations to meet their own needs" (United Nations General Assembly, 1987, p. 43).

### WHAT DOES SUSTAINABILITY MEAN TO YOU?

In early 2020, council engaged with the community to understand what sustainability meant to the community of Ipswich. This, coupled with subsequent engagement with council staff, informed the development of council's Sustainability Policy which was adopted in November 2020 and has also guided the development of this strategy.

Through this engagement, the community reaffirmed the importance of environmental sustainability by identifying a range of challenges that are most important for the City of Ipswich to act on and are summarised on the following page.

### WHAT YOU SAID

'Development that responds to changing climates and infrastructure that enhances liveability'

'A planning approach that considers the long term and is holistic'

'Reduce our waste and utilise opportunities to reuse and recycle and build a circular economy'

'Reduce our pollution and waste of energy and water resources'

'Energy and water ratings for buildings (council and residential)'

'Greening the city'

'Everyone doing their bit for the city'

'Preserve the environment for future generations'

'Protect native fauna and flora'

Responses received from the Ipswich community when we asked "What does Sustainability mean to you?" during the Sustainability Policy engagement conducted in 2020

### WHY A SUSTAINABILITY STRATEGY FOR IPSWICH?

For Ipswich, we have recognised that to maintain, and improve the liveability of the city, a Sustainability Strategy is needed to address the modern challenges that we face not only locally, but globally. You (the community) have told us (council) that we need to be more sustainable as a city and that sustainability is important to you. You highlighted the need to have access to good transport options and green open spaces, as well as ensure that our economy is strong with job opportunities. You also acknowledged concerns around climate change and waste management in lpswich. Having a clean and green environment is also important to you. Council has listened to the community feedback and as a result, the sustainability policy was adopted with the following six principles:

- 1. Governance and Leadership
- 2. Responsible Decision Making
- 3. Leave a Legacy
- 4. Sustainable Procurement
- 5. Efficient Use of Resources
- 6. Think Global, Act Local

The Sustainability Strategy is the action based delivery mechanism for the sustainability policy and directly reflects community feedback whilst addressing the sustainability challenges for the city.

Council seeks to be a leader as an organisation in sustainability and to facilitate and support economic prosperity whilst ensuring the wellbeing of our community by living in a considered way with the natural environment.

### CITY CHALLENGES

The two key challenges that are the focus for this Sustainability Strategy for the city right now, are population growth at a local level and climate change at a alobal level.

### POPULATION GROWTH

Our population is predicted to grow to 557,649 by 2041 from its current population of approximately 232,930 in 2021 (source: iFuture Corporate Plan 2021–2026). That means our current population will more than double over a 20-year period and that Ipswich will be the fastest growing LGA in Queensland and will be one of the fastest growing LGAs in Australia. As our community grows, we need careful planning as greater demand is placed on our resources, infrastructure, cultural landscapes and natural environment.

From a council perspective, the Planning Scheme is the statutory planning instrument to guide development in Ipswich. While the State Government principally sets the population targets and the urban footprint for development in Ipswich, council influences sustainable land use and growth management via the Planning Scheme.

The Sustainability Strategy sets out other avenues for growth management for Ipswich whereby as a community, we can make choices for living more sustainably as a shared responsibility.

### **CLIMATE CHANGE**

Climate change is a modern-day challenge that can impact our infrastructure, the way we live and our susceptibility to extreme weather events. Our ability as a city to plan, adapt and respond to a changing climate will ensure that we are prepared to meet this challenge.

Whilst climate change is recognised as a global concern, there is action we can take at a local level to mitigate impacts. National and state government policies acknowledge the climate science and are responding appropriately to meet Australia's international commitments to the legally binding Paris Agreement of 2015 that Australia is party to.

The Sustainability Strategy seeks to build capacity within the organisation and community through targeted actions to better equip ourselves to adapt to a changing climate and to contribute to the targets set in the Paris Agreement.

### **HOW THE SUSTAINABILITY STRATEGY 'FITS'**

This strategy exists in the context of the city's greater vision, and the other strategies that seek to deliver on it.

### ALIGNMENT TO THE SUSTAINABLE DEVELOPMENT GOALS

The United Nations Sustainable Development Goals (SDGs) were adopted in 2015, the same year as the Paris Agreement. They provide a blueprint to address global challenges related to poverty, inequality, climate, environmental degradation, prosperity, and peace and justice by 2030.

There is a close alignment between the SDGs and our responsibility as a local government to consider the long-term environmental, social and economic interests of our community.

As an example, by addressing climate change at a local level, we will contribute to this international effort. Increasing temperatures and changes to seasonal patterns and natural disasters will increase habitat loss should we not implement measures to mitigate and minimise these impacts at a local level.

In developing council's Sustainability Strategy, the targets and indicators of all 17 SDGs were reviewed. There were seven SDGs whereby council can deliver on related targets via this Sustainability Strategy and are as follows:

Source: United Nations Sustainable Development Goals. (2015). Retrieved from <u>Un.org/sustainabledevelopment/sustainabledevelopment-goals/</u>

### THE SUSTAINABILITY STRATEGY

### **OUR VISION**

We are proud of, and enjoy our waterways, our bushland, our flora and fauna and our cultural landscapes. We are continuing our work towards a sustainable future that mitigates environmental impacts and to a changing climate. We are known nationally for being clean, green and a city with a circular economy.

### **OUR GOAL**

To be a sustainable city.

### What do we mean by a sustainable city?

A sustainable city is one that is **clean**, **green**, **healthy** and **resourceful**. It is a city that is **economically productive**, **culturally respectful** and **environmentally mindful**. It is one that designs for reduced emissions and safe, reliable movement in and around the city; it is one that consciously decides to minimise waste and maximise resource recovery; it is one that intrinsically honours and values the limits of nature to support our existence.

To be a sustainable city is to have a **connected and resilient community**. It is one that has the ability to adapt to local, regional and global influences and continue to thrive. It is a **capable and caring community** that can both celebrate in times of triumph and lean on each other in times of crises.

Simply put, a sustainable city is a liveable city.

### SUSTAINABILITY STRATEGIC FRAMEWORK

In consultation with our community, there were five key Action Areas to achieve being a sustainable city that emerged and that address the two principal challenges that the city faces – population growth and climate change.

The five Action Areas for the Sustainability Strategy are:

### PRIORITY ACTION AREAS:

- A Sustainable Council It is critical for council
  as an organisation to lead by example and
  facilitate projects and programs for the city to
  become more sustainable.
- Climate Adaptation Building our resilience to a changing climate will ensure we're able to continue to live comfortably and safely, and the impact to the environment is limited.

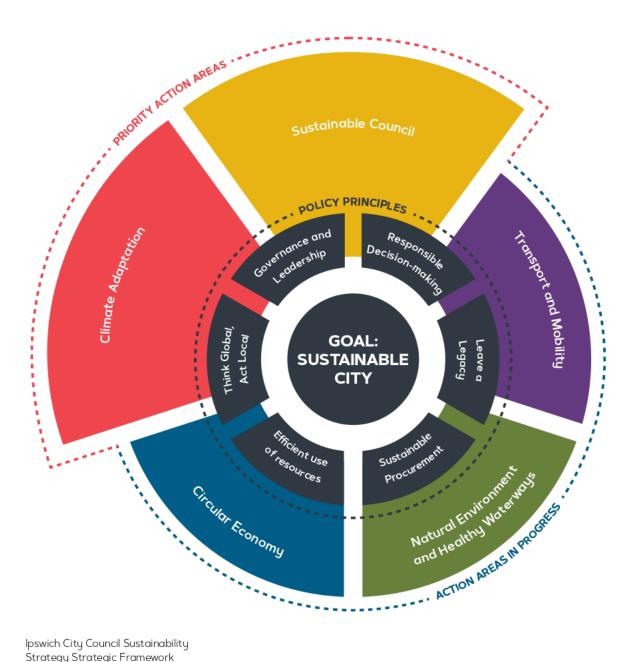

### PROGRESSED ACTION AREAS:

- Transport and Mobility How we and our visitors move in, and around the city, influences the level of congestion on our roads and air pollution. Encouraging active transport and access to reliable public transport can reduce road congestion and subsequent air pollution.
- 4. Natural Environment and Healthy Waterways Our natural environment and waterways are key to supporting diverse ecosystems, our cultural landscapes and our wellbeing. How we preserve the environment and our waterways for generations to come will depend on how we value and plan for these natural assets now.
- 5. Circular Economy Waste has been an ongoing challenge for the City of Ipswich owing to large volumes of waste being accepted from outside of the city. However, there are opportunities to change the way we manage waste by adopting a circular economy approach.

The strategic framework illustrates how the goal, policy principles and Action Areas 'fit together' to form the basis of the Sustainability Strategy.

City of Ipswich Sustainability Strategy 2021-2026

Ipswich City Council Sustainability Strategy Strategic Framework

### STRATEGY OUTCOMES

By implementing the Sustainability Strategy, there are several outcomes that the strategy is setting out to achieve. The outcomes will provide the incentive for the implementation of the strategy to reach the sustainable city goal. The following are high-level outcomes identified for the strategy which will then be used as indicators to measure the success of the strategy implementation.

### STRATEGY OUTCOMES

- Access to green space
- Access to sustainable transport
- Resilient and well-informed community
- Valuing and respecting Aboriginal cultural connection to country
- Support healthy lifestyle
- Increased support of ethical practices

- Reduced carbon emissions
- Access to natural areas and biodiversity
- Improved city cooling
- Reduced energy consumption
- Reduced waste generation
- Reduced water consumption
- Increased support of renewable technology
- Improved waterway health
- Protecting our Aboriginal cultural heritage and cultural landscapes

- Support new industry
- Support local jobs
- Increased resource efficiency
- Reduced operating costs

- Leading by example
- Increased collaboration
- Monitoring and reporting

# SUSTAINABILITY ACTION AREAS

## PRIORITY ACTION AREA 1: SUSTAINABLE COUNCIL

We know the big issues that affect our city, from waste management to the health of our waterways. While we can influence and support businesses and the wider community, we can make direct change through how we conduct our own business.

By developing the right tools and capability, council can pursue more sustainable outcomes. It will take time and incremental change; however, through committed leadership and a well-equipped workforce – we can make a difference.

This means the decisions and the activities we undertake as an organisation every day – the energy and water we use, how we minimise our waste, and the purchasing decisions we make as a council – we can achieve best practice in sustainability. By taking a leadership role, we also aim to inspire best practice among local business and our residents and enable our community to move towards a sustainable city.

As one of Australia's fastest growing regions, we want to lead the way in sustainability performance by 'walking the talk'. Our community expects it, and we are committed to it. By doing this, we will reduce our running costs, minimise the use of valuable resources and play our part in mitigating against climate change risk and its impacts.

The way council plans to be a more sustainable council is by focussing on five key areas of our operations in the first instance. These five focus areas are:

- ENERGY AND CARBON REDUCTION
- WATER EFFICIENCY
- RESOURCE RECOVERY AND WASTE MINIMISATION
- SUSTAINABLE PROCUREMENT
- GREEN WORKPLACE TRAVEL

# SUSTAINABLE COUNCIL FOCUS AREA 1:

### **ENERGY AND CARBON REDUCTION**

#### Our God

lpswich City Council will reduce organisational carbon emissions by 50% by 2026.

#### Our Actions

Our central action to reduce emissions will include a program of capital works for energy efficiency upgrades, including streetlight LED retrofits, and to implement renewable energy projects. In addition to these major work programs, emissions from transport will be addressed through the supply chain and council's vehicle fleet. Emissions from waste will be further reduced through the implementation of the Resource Recovery Strategy.

- Report annually on council's emissions reduction activities
- Reduce energy consumption through efficiency measures including but not limited to; LED street lighting retrofits and council asset upgrades
- Targeted implementation of Rooftop Solar PV systems and battery storage (where fit for purpose)
- Reduce emissions associated with council's fleet by transitioning to low emissions vehicles and equipment e.g. hybrid and electric vehicles
- Power council's electricity requirements with renewable energy via a Power Purchase Agreement
- Enhance measurement and monitoring of organisational energy and carbon emissions including Scope 3 emissions.

### Why is this important?

Global efforts to tackle climate change include a collective agreement to reduce greenhouse gas emissions, as required under the Paris Agreement. The Paris Agreement, signed by 192 Parties – including Australia – aims to:

'Strengthen the global response to the threat of climate change by keeping global temperature rise this century well below 2 degrees Celsius above pre-industrial levels and to pursue other efforts to limit the temperature increase even further to 1.5 degrees Celsius.' (United Nations, 2017).

In 2020, Ipswich City Council generated approximately 25,543 tonnes of carbon dioxide equivalent (CO2e) from our operations (Scope 1 and 2). The emissions from streetlights were 32.5% of council's emissions with buildings and facilities making up 45.2%. Emissions from our fleet made up 19.5% of our emissions. Council will seek to build on this emissions inventory through tracking Scope 3 emissions in future reporting.

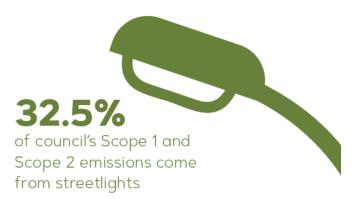

Over time, the city has worked hard to reduce emissions through energy efficiency upgrades and implementing renewable energy projects (solar). There are, however, more opportunities for deeper energy savings and emissions reduction through continuing with these practical measures into the future.

### What we're already doing?

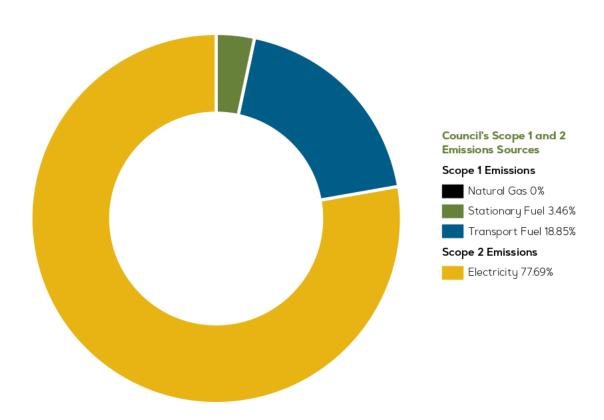

- Constructed a new administration building (1 Nicholas Street) with a 5 green star rating
- Continuing to deliver LED lighting replacement in our buildings, facilities and street lighting
- Monitor our electricity and emissions performance
- Inclusion of solar photovoltaic (PV) systems in the design of new buildings where it is viable such as the recent Rosewood Library and 1 Nicholas Street
- Actively investigating suitable smart node applications for park and street lighting.

### Corporate Document Link

Renewable Energy Plan

### Outcomes

 Access to sustainable transport

- Reduced energy consumption
- Reduced carbon emissions
- Increased support of renewable technology

- Increased resource efficiency
- Reduced operating costs

- Lead by example
- Monitoring and reporting

Sustainable Development Goal Alignment

### SUSTAINABLE COUNCIL FOCUS AREA 2: WATER EFFICIENCY

#### Our Goal

lpswich City Council is innovative, progressive and efficient in the way we use water in our operations.

### **Our Actions**

- For existing assets, investigate and identify opportunities for water efficiency measures to be implemented through maintenance upgrades and/ or for specific targeted water reduction/ alternative water projects.
- For new projects, develop design specifications for improved water efficiency and water quality outcomes for Council-delivered projects.
- Monitor water use and demand cycles using Council's sustainability data platform and smart metering and apply adaptive management principles through reporting.
- Work and partner with Urban Utilities to build climate resilience in Council's water usage wherever feasible e.g. purified recycled water and networks.
- Work with user groups and sporting clubs to build water-wise awareness and incentivise water efficient behaviour.

### Why is this important?

Water is crucial to the wellbeing of our city. Our operations consume over 440ML per annum. Predominantly this is for irrigation in our parks and green spaces as well as servicing high water usage community facilities such as swimming pools and council-owned buildings.

Parks, green spaces and community facilities are crucial to the physical and mental well-being of our communities. As our city continues to grow, this will increase the use of these assets putting pressure on our water supply to maintain these assets at required service levels.

Our approach aims to minimise the impact of climatic conditions such as drought and heat waves on our operations to ensure we have access to water when it is hot and dry. We acknowledge the impacts of climate change are expected to increase periods of drought, heat and flood cycles. As such, our approach includes utilising more efficient methods of water consumption and capturing and using alternative water sources in our operations.

Source: East Coast Cluster Report, Climate Change in Australia Projections for Australia's Natural Resource Management Regions

### What we're already doing?

- Completed irrigation upgrades at high-water using parks
- Implemented stormwater harvesting, treatment and reuse at several of our parks
- Utilising water efficient fixtures and fittings in council buildings
- Improving effectiveness of irrigation by using agronomic measures to maximise growth (i.e. soil texture and depth, physical intervention on soil compaction, weed and pest management, fertiliser frequency)
- Trialling water smart street trees in selected locations.

### Outcomes

- Reduced water consumption
- Healthy and clean waterways

- Increased resource efficiency
- Reduced operating costs

- Lead by example
- Monitoring and reporting

### Sustainable Development Goal Alignment

City of Ipswich Sustainability Strategy 2021-2026

# SUSTAINABLE COUNCIL FOCUS AREA 3:

### SUSTAINABLE PROCUREMENT

#### Our Goal

To promote and embed sustainable procurement practices in all of council's procurement activities.

### **Our Actions**

- Identify immediate opportunities to procure more sustainable goods and services and quantify the cost/ benefits using a category management approach
- Embed sustainable procurement procedures and requirements into purchasing category specifications and proposal evaluation criteria via the update of procurement templates
- Educate staff in sustainable procurement practices
- Engage with suppliers to communicate and build capacity around sustainable procurement to assist them in becoming preferred suppliers with council
- Establish a method to measure and monitor the 'triple bottom line' benefits of implementing sustainable procurement practices.

### Why is this important?

Under the Local Government Act 2009, council has a responsibility to ensure that service delivery and the management of assets and infrastructure are done so in a sustainable way under sustainable development principles. This is to ensure that council's procurement activities consider financial, environmental and social aspects when procuring goods and services.

### What we're already doing?

- Purchasing carbon neutral office paper
- Including environmental performance requirements in contracts
- Developed a Procurement Procedure that includes social and sustainable procurement.

### Corporate Document Link

- Sustainability Policy
- Procurement Procedure

### Outcomes

 Increased support of ethical practices

- Reduced energy consumption
- Reduced Carbon emissions
- Reduced water consumption

- Increased resource efficiency
- Reduced operating costs
- Support local jobs

- Lead by example
- Increased collaboration
- Monitoring and reporting

'Sustainable procurement integrates economic, environmental and social considerations into the specifications and evaluation criteria in procurement process, with the goal of reducing adverse impacts on human health, the natural environment, and minimising resource consumption and waste wherever possible.'

Sustainable Development Goal Alignment

### SUSTAINABLE COUNCIL **FOCUS AREA 4:** RESOURCE RECOVERY

### AND WASTE MINIMISATION

### Our Goal

To reduce the generation of waste in council's operations and to maximise opportunities for resource recovery.

### **Our Actions**

- Source separate waste streams wherever possible and feasible for recycling and recovery
- Seek products that have minimal or no packaging or packaging that is recyclable
- Reuse and recycle materials such as asphalt, crumbed rubber, plastic and concrete in council's construction activities
- Implement a council wide internal food and organics recovery program
- Develop waste management plans for all Council construction activities and contractor delivered projects.

### Why is this important?

The Queensland Government's Waste Management and Resource Recovery Strategy has a vision to become a zero-waste society and to move towards a circular economy. Traditionally, waste management practices have followed a linear process; the take, make, dispose model prompting significant changes to Queensland's waste legislation to support a circular economy.

One of council's key functions is to deliver waste and recycling services for the community; therefore, council has a key role in supporting the State Government's waste strategy and in meeting the State targets of 55% diversion rate from landfill and 50% recycling target by 2025 for municipal solid waste. In addition, it is council's role to lead by example by implementing waste avoidance and minimisation actions for the organisation and to reuse and recycle materials in council delivered projects (Source: ICC Resource Recovery Strategy).

### What we're already doing?

- Monitoring and reporting performance for our waste management activities
- Investigating opportunities into pilot projects aimed at increasing resource recovery within council
- Implementing source separation bins for different waste streams in 1 Nicholas Street
- Implemented a Food Organic and Garden Organics (FOGO) recycling program in council's administration building.
- Specifying foamed bitumen and other stabilisation techniques in the reconstruction and rehabilitation of road pavements.

### Corporate Document Link

- Resource Recovery Strategy
- Waste and Circular Economy Transformation Directive

### WASTE AND RESOURCE MANAGEMENT HIERARCHY

### Outcomes

- Reduced carbon emissions
- Reduced waste generation

- Increased resource efficiency
- Reduced operating costs
- Support new industry
- Support local jobs

- Lead by example
- Monitoring and reporting

### Sustainable Development Goal Alignment

City of Ipswich Sustainability Strategy 2021-2026

# SUSTAINABLE COUNCIL FOCUS AREA 5:

### **GREEN WORKPLACE TRAVEL**

### Our Goals

 Increase council staff participation in choosing sustainable and active transport modes

### **Our Actions**

- Engage with major employment generators in lpswich to develop and implement Sustainable (Green) Workplace Travel Plans
- Implement the Green Workplace Travel Plan for 1 Nicholas Street
- Investigate the concept of purchasing a small fleet of e-bikes for council staff to use when making small trips to test and showcase their capabilities and benefits.

### Why is this important?

Council is a major employer in the Ipswich CBD area and therefore, has an influence on parking demand and traffic congestion in the CBD. Where council can encourage and facilitate employees to make sustainable transport choices, private vehicle use can be minimised alleviating some of the pressures caused by parking and congestion.

Council has an opportunity to take a leadership role in implementing the Green Workplace Travel Plan for 1 Nicholas Street which can then provide a pathway for other major employers across Ipswich to follow suit. Having a variety of sustainable transport options to get to and from work in the CBD and other major employment areas such as Springfield, supports this strategy's goal of being a sustainable city.

### What we're already doing?

- Developed the Green Workplace Travel Plan for 1 Nicholas Street
- End of trip facilities provided at 1 Nicholas Street to support active transport to work for staff.

### Corporate Document Link:

■ iGO - City of Ipswich Transport Plan

### **Outcomes**

- Access to sustainable transport
- Support healthy lifestyle

Reduced carbon emissions

Lead by example

### Sustainable Development Goal Alignment

## PRIORITY ACTION AREA 2: CLIMATE ADAPTATION

Climate change is the change in the pattern of the weather over a long period of time, predominantly caused by greenhouse gas emissions. Climate change is already having far reaching impacts across Australia, and in Ipswich this has meant periods of drought, flooding and extreme heat. How we cope depends on how we mitigate and adapt to climate change now and plan for the future. Putting mitigative and adaptive climate change measures in place will help the City of Ipswich take quantitative and practical steps towards protecting and strengthening the Ipswich community against the impacts of climate change.

Many of the challenges for the City of Ipswich are likely to be exacerbated by changes in climate over time. Council is committed to using the best scientific information and local climate projections as a basis for climate change mitigation and adaptation decision making.

Modelling shows that over time, the Ipswich region will continue to be exposed to:

- higher average temperatures across all seasons
- more hot days and extreme heat waves
- increased intensity of extreme rainfall events
- longer periods of drought
- more frequent floods
- a harsher fire-weather climate.

Source: East Coast Cluster Report, Climate Change in Australia Projections for Australia's Natural Resource Management Regions.

This section explores the challenge of climate change and the impacts on our organisation, natural environment and community. It looks at the mitigation and adaptation actions we can take to address it. The four focus areas are:

- CITY EMISSIONS
- URBAN HEAT AND URBAN GREENING
- DISASTER MANAGEMENT
- CLIMATE RISK MANAGEMENT

# CLIMATE ADAPTATION FOCUS AREA 1: CITY EMISSIONS

### Our Goal

lpswich is recognised as a low carbon city.

### **Our Actions**

- Investigate and understand the City of Ipswich's emissions including a baseline inventory
- Support business and industry to reduce energy and emissions via education programs
- Educate the community regarding the implications of climate change and ways to adapt to a changing climate
- Attract new business and industries to Ipswich with a focus on low emissions technology.

### Why is this important?

Council recognises that shared responsibility is needed at all levels of government, by business, by investors, community organisations and residents to reduce greenhouse gas emissions. As an example, Springfield City Group has committed to zero net energy by 2038 and is rolling out a number of actions in the Greater Springfield area to attract low carbon businesses to Ipswich.

Taking action to reduce emissions will enable a well-planned transition to a low carbon future that meets national and local needs while managing costs and risks. In many cases, investing in low carbon infrastructure such as roof top solar, electrification of vehicles and improving building efficiency provides valuable benefits, such as improved energy productivity, creation of new industries and jobs, and improved liveability within the community.

The decisions made today about energy, infrastructure, buildings, transport planning and waste will lock in the pathway to achieving rapid decarbonisation for lpswich city.

Over 37,000 individual roof top solar power systems operating across the city representing over 192 megawatts of installed capacity.

Or to put it another way, 30% of all households and businesses are generating renewable energy, reducing their carbon footprint, and saving on electricity costs.

Source: AEMO Distributed Energy Resources (DER) Register

### What we're already doing?

- Investigating ways to quantify the current 'base line' emissions of the City of Ipswich
- Collaborating with other councils and organisations to understand best practice in community emissions measurement
- Keeping up to date of energy industry developments which would support community emissions reduction opportunities.

#### Outcomes

- Resilient and well-informed community
- Support healthy lifestyle

- Reduced carbon emissions
- Reduced energy consumption
- Increased support of renewable energy

- Support new industry
- Support local jobs
- Increased resource efficiency

Increased collaboration

### Sustainable Development Goal Alignment

## CLIMATE ADAPTATION FOCUS AREA 2:

### URBAN HEAT AND URBAN GREENING

#### Our God

Improve liveability by cooling the city and protecting people and communities from heat stress.

### **Our Actions**

- Undertake a baseline analysis to map Ipswich's urban heat island (UHI)
- Develop an Urban Greening Plan
- Ensure the planning scheme includes provision for natural asset protection and green spaces
- Analyse the economic impact of urban heat island effect via climate scenario analysis.

### Why is this important?

Urban heat 'islands' occur when the natural environment is replaced with man-made structures such as pavements and buildings which absorb and retain heat. This causes temperatures in these areas to be higher than vegetated areas. Heat in the City of Ipswich impacts our community, businesses and the natural environment in many ways including increased cost for cooling our homes and increase in heat-related stress. Our city on average is expected to be 0.9 degrees hotter by 2030 as well as experiencing an increasing number of days reaching temperatures above 35 degrees Celsius.

Source: East Coast Cluster Report, Climate Change in Australia Projections for Australia's Natural Resource Management Regions.

We can use the city's assets, such as our recreational areas and green spaces, to ensure people can cool down on hot days. We can also use direct measures, such as greening the urban environment, increasing canopy

cover, increasing surface permeability, installing green roofs or rooftop solar installations, building with the future in mind and utilising community facilities in our public places to give communities relief from the heat. These actions ultimately aim to improve liveability and to prioritise protection for people and communities as we adapt to a changing environment.

### What we're already doing?

- Partnering with Griffith University (GU) and University of Sunshine Coast (USC) to collect temperature and humidity data to assist with modelling impacts of urban heat on our community through a UHI pilot project.
- Considering sustainable urban design in buildings and facilities.

The city currently experiences over 12 days each year above 35°C

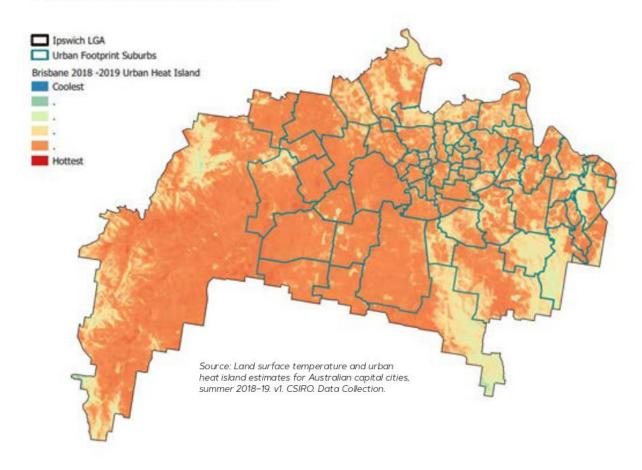

Data as of February 2019.

Source: East Coast Cluster Report, Climate Change in Australia. Projections for Australia's Natural Resource Management Regions

City of Ipswich Sustainability Strategy 2021-2026

## URBAN HEAT MAPPING OF THE IPSWICH LOCAL GOVERNMENT AREA

#### Outcomes

- Access to green space
- Support healthy lifestyle

- Improved city cooling
- Reduced energy consumption

- Increased resource efficiency
- Reduced operating costs

## CLIMATE ADAPTATION FOCUS AREA 3: DISASTER MANAGEMENT

#### Our Goal

To increase community awareness and resilience to climate-related disasters.

#### **Our Actions**

- Partnering with local community leaders and Traditional Owners to increase the community's capability to build resilience, undertake disaster planning at home and identify and minimise risks, through the City Wide Resilience and Preparedness Project
- Continue to develop community awareness and education resources about identifying and responding to risks, including but not limited to floods, fires, severe storms and heatwayes
- Continue building the capability of the City of Ipswich Local Disaster Management Group and Local Recovery and Resilience Group to ensure coordinated and effective preparation for, response to and recovery from disaster events
- Identify and support community-led disaster risk awareness, preparedness and recovery initiatives.

#### Why is this important?

Queensland is the most disaster-prone state in Australia, and as our climate changes, so too will the frequency, duration and intensity of disaster events. These events can cause significant environmental, economic and social impacts and consequences including damage to homes, injury and mortality, higher insurance costs, loss of livelihoods and more resources required for emergency response.

When coupled with population growth and urban development in hazard-prone areas, the risks associated with these events will increase, so it's important that we work to become a more resilient community with appropriate, effective and efficient adaptation and response mechanisms in place.

Disaster resilience is a system or community's ability to rapidly accommodate and recover from the impacts of hazards, restore essential structures and desired functionality, and adapt to new circumstances. Everybody has a role to play in reducing disaster risk and enabling community resilience at home, in our families and our local communities and networks.

#### What we're already doing?

 Providing the My Ipswich Alerts service free of charge to enable residents to receive alerts of potentially dangerous weather and bushfires and take action to stay safe

- Implementing the Ipswich Integrated Catchment Plan as part of our ongoing commitment to understanding, preparing for and responding to floodevents
- Ongoing community education, awareness and engagement activities at local community and industry events and forums to promote disaster awareness and preparedness
- Providing ongoing support to the State Emergency Service (SES), through a support policy, to enable the City of Ipswich to be more responsive to disaster events
- Developed Bushfire Hazard Response plans for the areas in Ipswich that face high bushfire risk
- Partnered with the Queenslanders with Disability
  Network, the Centre for Disability Research
  and Policy at The University of Sydney and the
  Queensland Government, to promote the Disability
  Inclusive Disaster Risk Reduction Framework and
  decrease disaster risk for people with disabilities
  and their carers
- Maintaining, reviewing and updating the Local
  Disaster Management Plan and Local Recovery Plan
  in consultation with the Local Disaster Management
  Group and the Local Recovery and Resilience Group,
  to ensure a coordinated multiagency response to
  and recovery from disasters in our city
- Ongoing coordination of the Local Disaster Management Group and subsequent partnering with emergency services and support agencies on community awareness and education initiatives.

#### Outcomes

 Resilient and well-informed community

- Lead by example
- Increased collaboration

#### Sustainable Development Goal Alignment

City of Ipswich Sustainability Strategy 2021-2026

### CLIMATE ADAPTATION **FOCUS AREA 4:**

#### CLIMATE RISK MANAGEMENT

#### Our Goal

Enhance council's risk assessment process in relation to climate change and quantify the extent of climate change risks into council's corporate risk register and risk management framework.

#### **Our Actions**

- Develop a climate change policy
- Undertake climate scenario analyses for physical and transitional risks for Councils operations and community assets to quantify climate risk for Council
- Develop a climate risk management strategy
- Investigate opportunities to design for climate resilience, including support for sustainable buildings and green infrastructure, sustainable built environment elements in the planning scheme and advocating for more sustainable elements in building codes
- Incorporate and embed consideration of climate change within council's corporate governance documents
- Educate, communicate and report on the risks and opportunities associated with climate change to stakeholders, staff and community.

#### Why is this important?

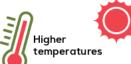

Climate change is a pressing issue for local government that is already manifesting as a legal, social, economic and environmental risk. Local governments make decisions that span generations (e.g. roll-out of infrastructure, planning for future settlements) and as such, need to be actively assessing and responding to the direct and indirect risks that climate change presents.

lpswich City Council needs to be positioned to respond to changes in Australian Government and Queensland policy frameworks and regulatory regimes in this rapidly changing space.

#### What we're already doing?

- Member of the Queensland Climate Resilient Councils (Q CRC) program and have held faceto-face briefing climate risk sessions with senior management and staff
- Conducted a climate risk governance assessment through the Q CRC program
- Developed a climate adaptation plan for 1 Nicholas Street.

#### Climate change impacts on the LGA

Outcomes

Resilient and well-informed community

- Reduced carbon emissions
- Improved city cooling
- Reduced energy consumption

- Support local jobs
- Increase resource efficiency
- Reduced operating costs

Lead by example

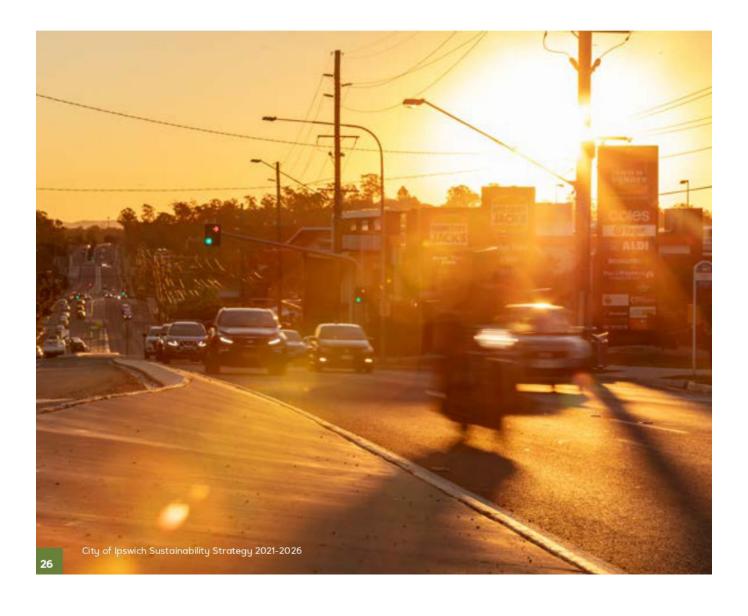

## PROGRESSED ACTION AREA 3: TRANSPORT AND MOBILITY

One of the challenges that the City of Ipswich faces is how we move in, and around the city. The majority of trips within Ipswich are undertaken by private motor vehicles. This is largely due to Ipswich's Iow-density urban form, uncompetitive public transportation and disaggregated network of active transport infrastructure. Additionally, Ipswich battles with a car dominated culture and an expectation that cars will always be provided for through the continuation of space for the movement (i.e. new and upgraded roads) and parking.

The City of Ipswich Transport Plan 'branded as iGO' is council's masterplan for the city's transport future. iGO is a high-level aspirational document that provides overarching direction to respond to a number of transport issues and challenges that are faced within Ipswich. Released in June 2016, iGO is the city's first integrated transport plan that takes into account all modes of land transport.

To address transport and mobility issues in relation to the Sustainability Strategy, the following focus areas have been highlighted from iGO as opportunities for more sustainable modes of transport and less reliance on private vehicles:

- SUSTAINABLE TRANSPORT
- ACTIVE TRANSPORT.

## TRANSPORT AND MOBILITY FOCUS AREA 1:

SUSTAINABLE TRANSPORT

Options for Sustainable Transport include transport modes such as public transport, ride-sharing, electric vehicles or low emission vehicles, and e-mobility (e.g. e-scooters and e-bikes).

#### Our Goals

- Increase community awareness to support the use of sustainable transport options
- Enable the ability for the community to uptake sustainable transport options.

#### **Our Actions**

- Support and/or undertake public education and information campaigns and events that promote the benefits of sustainable transport modes
- Encourage the deployment and uptake of car and ride sharing schemes and e-mobility.

#### Why is this important?

iGO – City of Ipswich Transport Plan outlines council's aspirations to advance Ipswich's transport system and guide future investment decision making.

Some of the issues affecting a sustainable transport future for Ipswich and the key drivers for change include:

- high car use
- population growth
- low density suburban form
- uncompetitive public transport system
- fuel and climate change.

#### What we're already doing?

- In addition to developing the iGO City of Ipswich Transport Plan, council have also developed a number of sub-strategies and action plans:
  - iGO Active Transport Action Plan
  - iGO Public Transport Advocacy and Action Plan
  - iGO Intelligent Transport Systems Strategy
  - iGO Road Safety Action Plan
  - iGO Freight Action Plan
- Actively supporting the Queensland Government's Connected Vehicles – Intelligent Transport System (C-ITS) trial in Ipswich
- Advocated for electric vehicle (EV) charging stations to be included at key locations in Ipswich as part of Phase 2 of the Queensland Government's Electric Super Highway initiative
- Advocating to the Queensland Government for public transport improvements and investment in projects such as the Ipswich to Springfield rail corridor
- Investigating the alternative use of parking revenue for the purposes of sustainable transport initiatives
- Investigation into e-Scooter and e-bike hire providers for principal activity centres.

#### Corporate Document Link:

iGO – City of Ipswich Transport Plan

#### Outcomes

- Access to sustainable transport
- Support healthy lifestyle

Reduced carbon emissions

## TRANSPORT AND MOBILITY FOCUS AREA 2:

**ACTIVE TRANSPORT** 

Active transport includes walking, cycling and human-powered movement (e.g. skateboards, scooters).

#### Our Goals

- Make active transport choices easy and achievable within the city to reduce the reliance on private vehicle use for short trips
- Engender the health and wellbeing benefits of active transport choices within the community.

#### **Our Actions**

- Plan, prioritise, advocate and deliver strategic bikeway projects in Ipswich that form part of the Principal Cycle Network Plan
- Plan, advocate and deliver end of trip facilities at all train stations, key bus stops and public transport hubs. Ensure that an appropriate number of different facility types are provided (i.e. secure bicycle cages for all day commuter parking, bicycle racks for shorter term parking)
- Delivered the Active Ipswich Strategy 2031 which is committing to creating a more active city.

#### Why is this important?

Walking, cycling and human-powered active transport modes provides many benefits for the health of both our community and the city. By choosing an active transport option when making short trips allows people the opportunity to enjoy 'incidental exercise' and to be potentially more engaged with their neighbourhood and urban environments.

Opting for active transport modes can also help alleviate traffic congestion, demand on parking and reduce carbon and air pollutant emissions in the business centres in Ipswich making for a cleaner and greener city.

#### What we're already doing?

- Continue to develop and grow the Ipswich Active School Travel Program and other school-based programs (i.e. walking/cycling bus) which promote children travelling to and from school via safe active transport modes
- Council is working in partnership with the Queensland Government in delivering the Principal Cycle Network (e.g. Brassall Bikeway).

#### Corporate Document Link:

iGO - City of Ipswich Transport Plan

#### Outcomes

- Access to sustainable transport
- Support healthy lifestyle

Reduced carbon emissions

#### Sustainable Development Goal Alignment

City of Ipswich Sustainability Strategy 2021-2026

## PROGRESSED ACTION AREA 4: NATURAL ENVIRONMENT AND HEALTHY WATERWAYS

Our natural environment and waterways provide habitat for the diverse range of flora and fauna of our region. In fact, Ipswich contains one of the most highly diverse natural environments in South East Queensland, from vine forest along the Brisbane River to the heath-covered top of Flinders Peak.

Besides its biological values, the natural environment contributes to the economic prosperity, amenity, liveability and lifestyle of the city and its residents. In addition, the natural environment and the waterways of our region provide a strong and lasting connection to country for Aboriginal people. The persistence of intact and accessible natural environments is critical for the ongoing connection to country and Aboriginal culture.

The natural environment provides extensive 'ecosystem services' such as clean air and water, noise and light management, local amenity and temperature regulation. In addition, there are social and cultural benefits that the natural environment provides such as recreational opportunities and enabling the continuation of cultural connection and cultural practice. These natural environment and cultural landscape attributes support a city that is environmentally and culturally respectful.

The need to protect and conserve our natural environment and waterways is significant both in terms of the uniqueness of the Australian landscape as well as its value to people. It is imperative for council to strike a balance between human need and conservation in order to preserve many of the city's natural resources and cultural landscapes for generations to come. In 2017, the percentage of the city mapped as naturally vegetated was 21.4%. That said, council has protected extensive areas from clearing through tools such as land-use planning, land acquisitions and landholder partnerships.

Source: Queensland Government – Bioregion and Subregion Analysis of Remnant Regional Ecosystem Vegetation 1997–2017).

The goal for the natural environment and healthy waterways is to ensure that we leave a legacy for future generations by creating a sustainable and liveable city.

This section focuses on:

- NATURAL ENVIRONMENT AND CULTURAL LANDSCAPES
- WATERWAYS AND WETLANDS

#### NATURAL ENVIRONMENT AND HEALTHY WATERWAYS

#### **FOCUS AREA 1:**

#### NATURAL ENVIRONMENT AND CULTURAL LANDSCAPES

#### Our Goal

Important areas of native bushland habitat and vegetation are conserved and restored, and the city responds appropriately to climate change.

#### **Our Actions**

- Ensure development of the new Natural Environment Strategy addresses climate change impacts and climate refugia objectives
- Implement actions to improve the condition of urban biodiversity corridors
- Work closely with the community through collaboration, partnerships and support programs that empowers and builds capacity as environmental stewards
- Undertake planning, management and maintenance activities for council's Natural Area Network that addresses implications of changing climatic conditions
- Adapt planning and delivery of environmental offsets, ensuring a long term approach is implemented that addresses climate change impacts
- Increase knowledge and model the impacts of climate change on threatened species and their distribution within lpswich LGA.

#### Why is this important?

lpswich supports a highly diverse natural environment with rainforests, dry vine forests, eucalypt forests and woodlands, swamps, and wetlands making up the city's habitat network. These natural areas provide habitat for a range of native flora and fauna, including the nationally significant brush-tailed rock wallaby and koala and a number of threatened flora.

Our city's population growth and growing urbanisation continues to place pressure on the natural environment, our cultural landscape and the diversity of native flora and fauna. By protecting our natural environment we can support the quality of life and liveability of residents, workers and visitors. Protecting bushland, biodiversity, cultural landscapes and habitat can support native flora and fauna to thrive into the future and enable cultural practices and traditions to continue.

As the climate changes, some threatened flora and fauna may have to rapidly adapt to changing environments and ecosystem types. Some areas that were once habitable may not be in the long term and some species may need conservation intervention to ensure their survival long term.

Ensuring that changing climatic conditions are considered in conservation planning and management is therefore critical. Recognition and systematic assessment of climate change refugia for wildlife is critically important, as is assessment of existing conservation land holdings to understand what the future is likely to hold for them.

#### What we're already doing?

- Continually delivering on Enviroplan conservation initiatives across our city
- Voluntarily acquiring strategically important conservation areas and including these in the Natural Area Estate
- Protecting significant areas through appropriate conservation zoning in the Ipswich Planning Scheme
- Maintain, enhance and rehabilitate council's 6,500 hectares of Natural Area Estate through delivery of conservation works, bushland maintenance programs, pest management control and investing in capital works
- Identifying and mapping the distribution threatened and locally significant species and planning for their conservation
- Developed a Platypus Recovery Plan and Threatened Species Plan to identify and manage threats.

#### Corporate Document Link:

- Natural Environment Policy
- Natural Environment Strategy
- State of the Natural Environment Report

#### Outcomes

- Access to green space
- Valuing and respecting Aboriginal Cultural Connections to Country
- Support healthy lifestyle

- Access to natural areas and biodiversity
- Protecting our Aboriginal Cultural Heritage and Cultural Landscape

#### Sustainable Development Goal Alignment

City of Ipswich Sustainability Strategy 2021-2026

#### NATURAL ENVIRONMENT AND HEALTHY WATERWAYS

#### **FOCUS AREA 2:**

#### WATERWAYS AND WETLANDS

#### Our Goal

Waterways and wetlands are rehabilitated and protected to provide continuation of cultural practices and traditions and ecological sustainability through good water quality, habitat and fauna connectivity, recreational outcomes and mitigation of major storm and flood events.

#### **Our Actions**

- Increase the water quality, habitat condition and streambank resilience of the city's waterways and wetlands through native riparian revegation in degraded areas.
- Investigate the potential changes to our catchment's flow regimes under a changing climate to inform strategic management priorities.
- Encourage and support community stewardship of waterways and wetlands through increased interaction opportunities and promoting these areas as engaging and accessible public spaces.
- Support urban and rural landholders in undertaking waterway management works on private property.
- Investigate and/or promote Cultural Water and its significance to maintain cultural values

#### Why is this important?

Waterways and wetlands provide important values to the community regardless of where they sit within the landscape, from mountain peaks, rural landscapes, to urban backyards and the heart of the city. Our waterways contribute to sustaining our way of life and play a pivotal role in maintaining both a liveable city and indigenous cultural relevance to Traditional Owners. Waterways also provide vital habitat for native flora and fauna, support urban cooling, provide water supply for agriculture and business consumption and play an important role in managing stormwater and mediating flooding.

#### What we're already doing?

- Developed and implemented waterway improvement plans for Black Snake, Bundamba, Deebing and Iron Pat Croeks
- Investing in on-ground programs and partnerships in catchment improvement projects, including the Franklin Vale initiative
- Carrying out riparian revegetation projects throughout the city's catchment to remove weeds and return degraded areas to their natural condition
- Delivering streambank stabilisation projects to mitigate erosion and sediment load on our rivers and waterways
- Rehabilitating aquatic connectivity at priority in-stream barriers identified in the region
- Implementing water sensitive urban design programs e.g. water smart street trees and stream naturalisation
- Ensuring the development of Ipswich is undertaken in a way which embraces the natural environment through appropriate land use planning and development assessment approvals
- Acquiring key areas for protection, such as flood plains to enhance natural areas
- Reviewed the stormwater quality offsets program.

#### Corporate Document Link:

Waterway Health Strategy 2020

#### Outcomes

- Support healthy lifestyle
- Valuing and respecting Aboriginal Cultural Connection to Country

- Access to natural areas and biodiversity
- Improved waterway health
- Protecting our Aboriginal Cultural Heritage and Cultural Landscapes

## PROGRESSED ACTION AREA 5: CIRCULAR ECONOMY

Waste has presented an issue for Ipswich, particularly in recent years with the spotlight on the interstate transport of waste being disposed in privately owned landfills in Ipswich. The introduction of China's National Sword Policy in 2018 has also created a challenge in managing recyclable waste both locally in Australia and globally. China's policy, in effect, placed a ban on the import of recyclable waste materials such as paper and plastics which meant that Australia could no longer export these products to China for recycling.

The State Government, in response to some of these issues, has introduced a Waste Management and Resource Recovery Strategy which also included a waste levy to deter the disposal of interstate waste to Queensland landfills. The state strategy also promotes the diversion of waste from landfill and supports effort being made to recover and recycle waste streams wherever possible to establish a circular economy and facilitate local recycling and manufacturing industries.

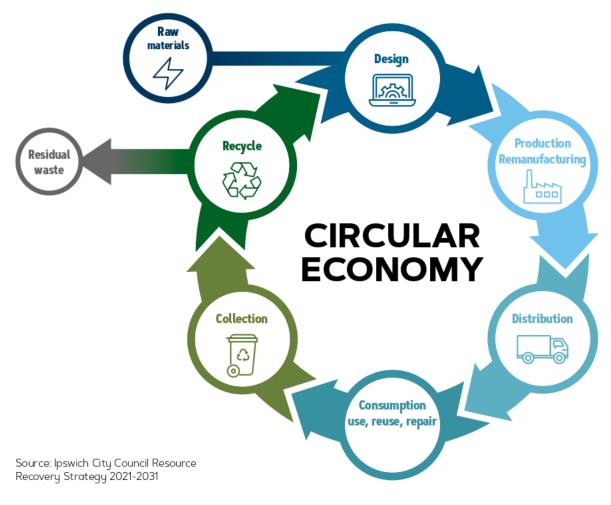

#### WHAT IS THE CIRCULAR ECONOMY?

The essence of a circular economy is to retain the value of materials within the economy for as long as possible, continually seeking ways to recycle, redesign and reuse materials in order to minimise the unsustainable depletion of our natural environment. (Source: ICC Resource Recovery Strategy).

Local government has a responsibility under the Waste Reduction and Recycling Act 2011 to manage waste for their communities. Council delivers waste services directly to the community via Ipswich Waste Services (IWS) operations and supports both Ipswich's business and residential community in implementing a circular economy to work towards a zero-waste society.

#### Focus areas:

- IPSWICH WASTE SERVICES OPERATIONS
- CIRCULAR ECONOMY BUSINESS AND INDUSTRY COLLABORATION
- CIRCULAR ECONOMY FOR THE COMMUNITY

City of Ipswich Sustainability Strategy 2021-2026

## CIRCULAR ECONOMY FOCUS AREA 1:

#### **IPSWICH WASTE SERVICES OPERATIONS**

#### Our Goal

Deliver effective and efficient waste management services for Ipswich through our people, processes and technology.

#### Our Actions

 Implement the actions from council's Resource Recovery Strategy.

#### Why is this important?

Ipswich Waste Services (IWS) is council's operational arm for delivering waste services to the residents and businesses of Ipswich. IWS sets the strategic direction for how these waste services will be delivered in consultation with the community, industry and government agencies. Council has a responsibility to deliver waste services that are reliable, efficient and environmentally sound to meet the needs of Ipswich's growing community.

#### What we're already doing?

- Delivering efficient waste and recycling services to Ipswich's residential and business community
- Improving and upgrading waste infrastructure at the Riverview Recycling and Refuse Centre.

#### Corporate Document Link:

- Resource Recovery Strategy
- Waste and Circular Economy Transformation Directive

#### Outcomes

Support healthy lifestyle

- Reduced carbon emissions
- Reduced waste generation

- Increased resource efficiency
- Reduced operating costs

## CIRCULAR ECONOMY FOCUS AREA 2:

## CIRCULAR ECONOMY BUSINESS AND INDUSTRY COLLABORATION

#### **Our Goal**

Effective collaboration with local resource recovery sectors to improve market development, economic growth and to assist emerging bio-markets.

#### **Our Actions**

- Proactively share data and information across the Queensland waste sector to support transparency, innovation and informed waste management planning and decision making
- Facilitate the uptake of the state sponsored ecoBiz sustainability program with small-to-medium businesses in Ipswich
- Deliver the 10 action items from Ipswich's Waste and Circular Economy Transformation Policy Directive.

#### Why is this important?

Working towards creating a circular economy enables the wise use of materials and resources to minimise otherwise useful waste going to landfill. In doing so, new industry and manufacturing processes can be established that support the use of recycled materials and innovations in product development. There is also the opportunity to localise circular economy activities and industries so that there are local employment opportunities and less transport emissions generated in moving materials for processing.

#### What we're already doing?

- Promoting a coordinated, consistent approach with regional partners and regulators to develop cost effective, innovative solutions and clear waste policy positions
- Encouraging tyre recyclers to beneficiate their products through improved contract management practices
- Participate in waste industry forums.

#### Corporate Document Link:

- Resource Recovery Strategy
- Waste and Circular Economy Transformation Directive

#### Outcomes

Support healthy lifestyle

- Reduced carbon emissions
- Reduced waste generation

- Support new industry
- Support local jobs
- Increased resource efficiency

Increased collaboration

# CIRCULAR ECONOMY FOCUS AREA 3: CIRCULAR ECONOMY FOR THE COMMUNITY

#### Our Goal

For the Ipswich community to be actively engaged in circular economy activities including improved recycling and choosing to buy products with recycled content.

#### **Our Actions**

- Deliver targeted community engagement and awareness programs to improve waste avoidance, recovery and reuse behaviours
- Roll out a Food Organic and Garden Organic (FOGO) program in the City.

#### Why is this important?

Traditionally, as a society we have relied on landfill disposal as the primary solution to disposing of our waste. There is a limit to the amount of suitable landfill sites within the city and given our forecasted population growth the amount of waste we generate will continue to grow. Additionally, disposal costs and environmental impacts associated with landfill disposal will increase exponentially should current waste management practices continue.

To drive change, targeted education and awareness programs aimed at adopting sustainable waste management practices to promote a low-waste society will support resource recovery and thus support a circular economy approach towards sustainable waste management.

#### What we're already doing?

- Promoting national waste reduction and reuse events through council media channels
- Deliver a school's waste education program.

#### Corporate Document Link:

- Resource Recovery Strategy
- Waste and Circular Economy Transformation Directive

#### Outcomes

Support healthy lifestyle

- Reduced carbon emissions
- Reduced waste generation

- Support local jobs
- Increased resource efficiency

#### **GLOSSARY**

**Adaptation** - Taking action to avoid, withstand or benefit from current and projected climate changes and impacts.

**Climate change** – A change in global or regional climate patterns, in particular, a change apparent from the mid to late 20th century onwards and attributed largely to the increased levels of atmospheric carbon dioxide produced by the use of fossil fuels.

Carbon offsets - Carbon offsets are tradeable units that represent abatement of greenhouse gas emissions. Offsets represent the rights to a greenhouse gas reduction. The carbon offsets purchased are retired through a registered third party so they cannot be counted twice.

**Carbon neutral** – Being carbon neutral means that the net greenhouse gas emissions associated with an organisation's or city's activities are equal to zero. It is achieved through a combination of measuring and reducing greenhouse gas emissions and purchasing carbon offsets. The terms zero net emissions, zero emissions and carbon neutral can be used interchangeably.

**Circular economy -** Retain the value of materials within the economy for as long as possible, continually seeking ways to recycle, redesign and reuse materials in order to minimise the unsustainable depletion of our natural environment.

**Emissions** - This term is used interchangeably with greenhouse gas (or carbon) emissions, unless specifically stated that it relates to air quality pollutants.

**Energy efficiency -** Using less energy to achieve the same output.

**Greenhouse gas emissions (GHG)** - The greenhouse gas emissions from human activities that cause climate change: carbon dioxide (CO2), methane (CH4), nitrous oxide (N2O), ozone (O3), and synthetic gases such as chlorofluorocarbons (CFCs) and hydrofluorocarbons (HFCs).

**Mitigation -** Actions and efforts undertaken to reduce the potential impacts of climate change.

Paris Climate Agreement - The Paris Climate Agreement entered into force on 4 November 2016. The Paris Agreement is made under the United Nations Framework Convention on Climate Change (Climate Change Convention, also referred to as the UNFCCC). Australia announced its ratification of the Paris Agreement on 10 November 2016. Its stated goal is to limit the increase in the global average temperature to 'well below 2°C' above pre-industrial levels, that we should 'pursue efforts' to limit the temperature increase to 1.5°C (Article 2). In addition, parties are aiming to peak global greenhouse gas emissions 'as soon as possible' (Article 4). According to the Intergovernmental Panel on Climate Change (IPCC), global warming of more than 2°C would have serious consequences, such as an increase in the number of extreme weather events.

QCRC - Queensland Climate Resilient Councils

RCP - Representative Concentration Pathway.

**Resilience -** The capability of preparing for, responding to, and recovering from challenging conditions. The ability to bounce back after change or difficulty.

**Recycled water -** Former wastewater (sewage) is treated to remove solids and impurities and used for non-potable water needs, rather than discharged into waterways.

**Renewable energy** – Energy from resources which are naturally replenished on a human timescale, such as sunlight, wind, rain, tides, waves, and geothermal heat.

**Sustainable Development Goals -** Are an urgent call for action by all countries - developed and developing - in a global partnership to address 17 varying goals.

**Water efficiency -** Using less water to achieve the same output.

**Zero emissions or net zero emissions -** The net greenhouse gas emissions associated with an organisation's or city's activities are equal to zero.

**Scope 1 Emissions** – Direct GHG emissions that occur from sources that are owned or controlled by the organisation e.g. transport fuels from council's fleet and natural gas usage in council operated facilities.

**Scope 2 Emissions -** GHG emissions that occur from the generation of purchased electricity consumed by council.

**Scope 3 Emissions -** GHG emissions that are a consequence of the activities of the organisation, but occur from sources not owned or controlled by the company e.g. fuel usage by major contractors who provide key services to council, business travel (air travel, hire care travel), organisational waste and paper use.

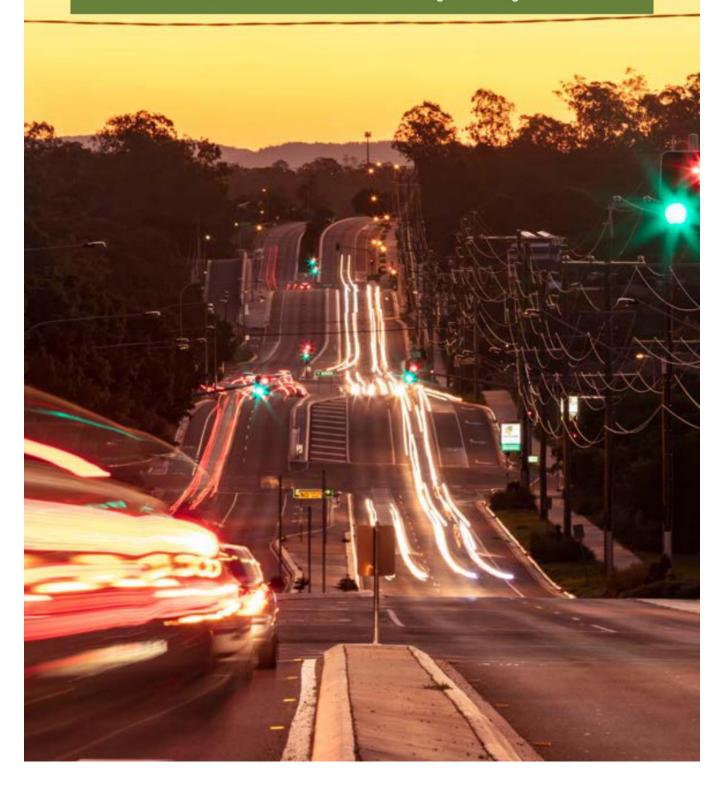

**Urban Greening -** The network of natural and semi-natural areas that deliver a range of environmental, economic and social values and benefits to urban places, including protection from flooding or excessive heat, or improving air and water quality, whilst also protecting biodiversity. Examples of urban greening include urban tree canopies, parks and sports fields, nature reserves and wildlife corridors, waterways and wetlands, stormwater harvesting systems, green roofs and walls, and tree-lined streets and pathways.

**Urban heat** - An urban heat island is an urban area or metropolitan area that is significantly warmer than its surrounding rural areas due to human urbanisation.

Council's Sustainability Strategy has set a strategic plan to be implemented over the next five years.

Each of the five priority areas of this strategy will help Ipswich to focus effort and resources to achieve the strategy goal of becoming a sustainable city.

By taking part in the city's sustainability journey, everyone can contribute to the current and future liveability of our city.

## **Community Engagement Report**

## Sustainable Ipswich

November 2021 Infrastructure and Environment Ipswich City Council

#### **Table of Contents**

Table of Contents	2
Background	2
Key Findings	3
Response Data	4
Conclusion	8
Images	9

## **Background**

#### **Purpose**

Council's Environment and Sustainability Branch is undertaking a review and update of council's Sustainability Strategy to align with the Sustainability Policy. The strategy will provide a pathway for council and the community to define sustainability for the city, and how the organisation and the city can become more sustainable and liveable.

Community engagement was undertaken in 2020 for the policy development and a public awareness and activation campaign including a program of events themed around environment and sustainability. This feedback was used in the development of the strategy.

This last phase of engagement has provided an opportunity to check in with the community regarding their initial comments and thoughts on sustainability and how that has translated into the sustainability strategy. It has also been an opportunity to gain feedback on the strategy framework to achieve the goal to become a sustainable city.

#### Methods

Online engagement was completed through Council's digital platform, **Shape Your Ipswich**. This included:

- survey on agreement of and suggestions for the strategy framework
- poll on the level of agreement for the goal to be a sustainable city
- asking what sustainability means to participants

The project was open on Shape Your Ipswich from 11 October to 7 November 2021. There were 44 contributions.

Face-to-face sessions were also held between 11 - 22 October at several locations across the city:

- Rosewood Library 13 participants
- Ipswich Central Library 9 participants

Sustainable Ipswich – Sustainability Strategy Engagement, October 2021

- Springfield Library 9 participants
- Orion Shopping Centre 21 participants
- Riverlink Shopping Centre 33 participants
- Karalee Shopping Centre 9 participants
- Booval Shopping Centre 2 participants
- Ipswich Central Business Network 15 participants

In total, 111 people participated in these face-to-face sessions. They provided feedback on their level of agreement with the framework, level of agreement with the goal to be a sustainable city and on what sustainability meant to them.

Feedback was captured on large interactive posters using dotmocracy and freehand comments.

Overall, 155 people participated in the engagement.

#### Other engagement methods

The strategy was also socialised at the below events:

- Ipswich Central CBD Partnerships group 20 participants
- Ipswich City Council Youth Sustainability Summit 165 participants

## **Key Findings**

There continues to be much discussion around the topic of sustainability.

For many, sustainability is a key focus for the liveability and future of the city, yet for others, they may have not given much thought as to what sustainability means for them and the full impacts.

When considering all the consultation feedback data (both SYI and face-to-face), over 90% of participants agreed or strongly agreed with the Sustainability Strategy framework. The action areas of Climate Change, Sustainable Council and Natural Environment and Healthy Waterways received the most agreement.

The Transport and Mobility action area received the least agreement consensus. This is reflected in the open comments received during the engagement regarding public transport and lack of accessibility (in terms of frequency, public transport (bus) routes and cost of trips) for people in Ipswich.

Open comments for suggestions on the action areas, presented the key themes of waste (recycling/reducing waste), reducing development and impacts on the city, increasing resource efficiency, getting more community involved in sustainability and the environment, increasing tree planting and improved public transport.

The themes regarding what sustainability means to the community was consistent with the previous feedback received in 2020: environment (native vegetation and land clearing), waste (recycling/reducing waste), resources (energy and water efficiencies) and being mindful of future generations.

Sustainable Ipswich – Sustainability Strategy Engagement, October 2021

93% of participants agreed or strongly agreed that the goal of becoming a sustainable city is right.

## **Response Data**

The findings below incorporate feedback from the Shape Your Ipswich platform and face-to-face sessions.

#### Q. What does sustainability mean to you? This is what you told us previously. Do you still agree?

For face-to-face sessions, this was an open comment poster allowing people to contribute their thoughts in freehand writing. The question also acknowledged the feedback from previous engagement and if community still agreed.

On Shape Your Ipswich, the question was an open comment "visioner" question allowing participants to write a free text response.

#### **Findings**

Overall, respondents agreed with the previous feedback on what sustainability means. This included being mindful of future generations and the impact we have on the current environment and resources.

The common themes of recycling and reducing waste, protecting the natural environment, resource efficiency and community involvement were evident in responses.

Many responses were also at an action level regarding what individuals, organisations and government should or could be doing to improve sustainability.

#### Sample comments:

Longevity - in housing, financial security, employment, community and household relationships, safety

E-waste recycling + communicate sites to recycle

We need more public education on what sustainability is

Enviro concern - energy & water (as a family) - What will we have left for the children

More eco-friendly & chemical friendly

Planting the right species in the right places - water smart trees

Sustainable cost of living

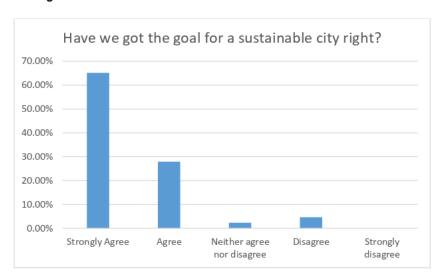

Sustainable Ipswich – Sustainability Strategy Engagement, October 2021

4

#### Q. Have we got the goal for a sustainable city right?

For face-to-face sessions, this was a dotmocracy poster displaying level of agreement with smiley faces (strongly agree, agree, neither agree nor disagree, disagree, strongly disagree). On Shape Your Ipswich, the question was a quick poll with the same levels of agreement.

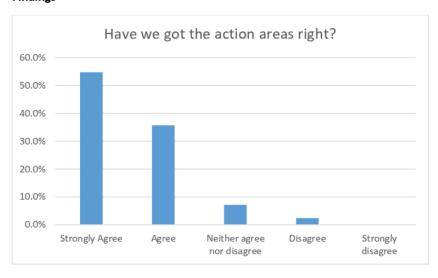

#### **Findings**

#### Q. Have we got the action areas right?

Face-to-face engagement asked the level of agreement using dotmocracy to the action areas as a whole. 90% of respondents strongly agreed or agreed with the framework action areas.

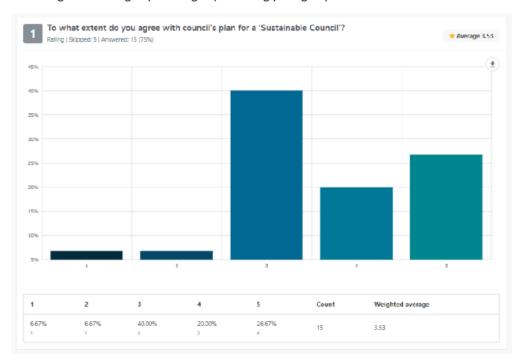

#### **Findings**

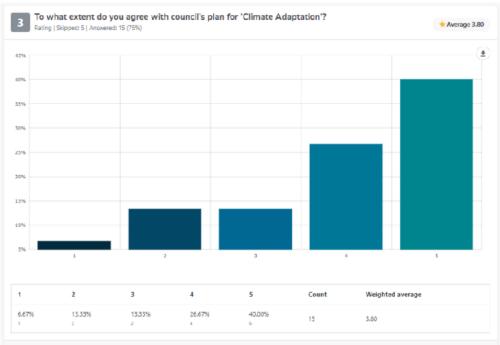

Sustainable Ipswich – Sustainability Strategy Engagement, October 2021

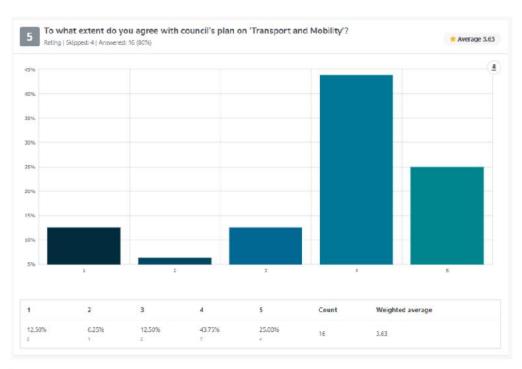

Shape Your Ipswich results were specific to each of the five action areas.

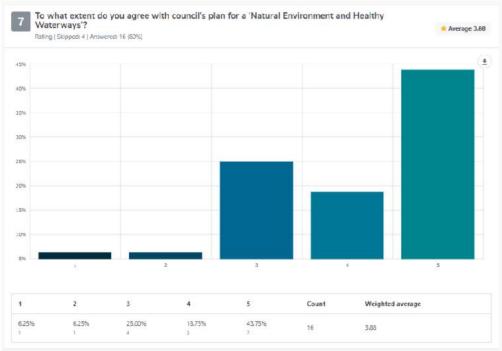

Participants responded using a level of agreement with smiley faces (5 - strongly agree, 4 - agree, 3 - neither agree nor disagree, 2 - disagree, 1 - strongly disagree)

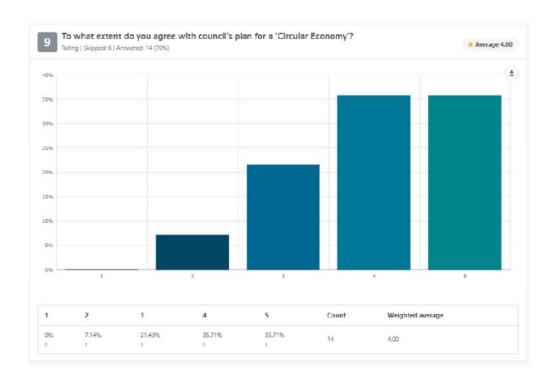

Sustainable Ipswich – Sustainability Strategy Engagement, October 2021

The full report addressing each of the action areas with featured comments can be read below:

## Conclusion

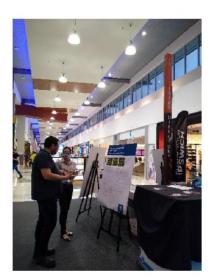

Feedback from this consultation has been valuable in completing the final draft of the Sustainability Strategy. With over 90% of participants agreeing or strongly agreeing with the Sustainability Strategy framework, it indicates that the strategy direction aligns with community sentiment and understanding. Community also agree with the goal of Ipswich becoming a sustainable city.

The Sustainability Strategy will now be presented to Council for endorsement.

Doc ID No: A7702750

ITEM: 3

SUBJECT: OUTCOMES - YOUTH SUSTAINABILITY SUMMIT

AUTHOR: ACTING NATURAL ENVIRONMENT AND LAND MANAGER

DATE: 10 NOVEMBER 2021

#### **EXECUTIVE SUMMARY**

This is a report concerning the Ipswich Youth Sustainability Summit. The Summit was held at the Ipswich Civic Centre on Wednesday 3 November and was a full day forum for Primary School students in grades 4 & 5. The day was designed to educate and inform students on sustainability and to develop and be involved with sustainability projects, innovations or ideas identified as important within their community.

#### RECOMMENDATION

That Council receive and note the outcomes of the Youth Sustainability Summit.

#### **RELATED PARTIES**

There was no declaration of conflicts of interest

Companies involved

- Down2Earth
- Mallow Sustainability
- Wilderness Protection Society QLD
- Natura Education
- Solar Schools
- South East Queensland Water
- Ipswich City Council Resource Recovery
- Ipswich City Council Natural Environment and Land Management

#### Schools involved

- Goonda State School Presented
- Springfield Central State School Presented

- Sacred Heart Catholic School
- Leichhardt State School
- Redbank Plains State School
- Ipswich Junior Grammar School
- Greater Springfield Homeschoolers
- Ipswich West State School
- St Peter's Lutheran College
- Woodcrest State School
- Ipswich Central State School

#### **IFUTURE THEME**

Natural and Sustainable

#### **PURPOSE OF REPORT/BACKGROUND**

As part of Sustainable Ipswich Month a series of events and educational activities were delivered throughout November 2021 in accordance with the core local government principles. The purpose of the campaign is to engage residents of all demographic backgrounds in discussions and to enhance public awareness about sustainability and local environmental issues.

The key highlight was the Ipswich Youth Sustainability Summit at the Ipswich Civic Centre held on Wednesday 3 November. The Summit was a full day forum for Primary School students in grades 4 & 5. The day was designed to educate and inform students on sustainability and to develop and be involved with sustainability projects, innovations or ideas identified as important within their community. The key highlights shown in Attachment 3 demonstrate that students walk away from the Summit feeling empowered to make a difference and return home and to school with ideas for the future.

Attachment 1 showcases the program for the Summit with a combination of presentations from sustainability groups and Springfield Central State School and Goodna State School. Later sessions included rotating workshops on waste and composting, climate and solar, and biodiversity in Ipswich.

Attachment 2 showcases action plans which were developed by students from all schools to implement the sustainability messages from the day.

#### **LEGAL/POLICY BASIS**

This report and its recommendations are consistent with the following legislative provisions: Local Government Act 2009

#### **RISK MANAGEMENT IMPLICATIONS**

There are no perceived risks associated with this recommendation

#### **HUMAN RIGHTS IMPLICATIONS**

#### **HUMAN RIGHTS IMPACTS**

#### **RECEIVE AND NOTE REPORT**

The recommendation states that the report be received and the contents noted. The decision to receive and note the report does not limit human rights. Therefore, the decision is compatible with human rights.

#### FINANCIAL/RESOURCE IMPLICATIONS

Costs associated with the Youth Sustainability Summit were within the operational budget and totalled \$20,000

#### **COMMUNITY AND OTHER CONSULTATION**

No comments were made by the following stakeholders other than that they agree with the information in this report. The following stakeholders and community groups were consulted during the development and planning of the Youth Sustainability Summit

- Environment and Sustainability Branch
  - Natural Environment and Land Management
  - Sustainability
  - Resource and Recovery
- Marketing and Promotions Branch
- Communications and Engagement Branch
- Local schools across the Ipswich LGA
- Local suppliers and presenters

#### **CONCLUSION**

The Youth Sustainability Summit 2021 achieved its objectives to educate and share awareness on sustainability messages to better enhance their schools and their city. The actions plans developed at the end of the Summit clearly demonstrated the success of learning from a variety of students, presenters and other inspiring youth.
